

CSF™

Capillary Suspension Fluid

THE CSF™ EXPERIENCE:
Over **15,500** kgs
of synthetic polymer
pumped across
120+ stages so far

AN EXCITING ALTERNATIVE TO VISCOUS FRACTURING FLUIDS

Less chemical in formation

Less formation damage

Enhanced sand placement

A more even proppant distribution – maximum net pay coverage

Performs in a wide range of temperature and water conditions

Significant reductions in heating and fluid costs

Adjust viscosity on the fly

Improved fluid control and fewer chemicals required with a smaller operational footprint
