

MVP™ Maximum Volume Placement

TRACK RECORD:
MVP Frac™ has been chosen
for more than **515 wells**,
representing more than
285,000 tonnes of sand
over **8,300 stages** so far.

PROVEN PROPPANT TRANSPORT AND PRODUCTION ENHANCEMENT TECHNOLOGY

- Improved proppant transportation means more uniform proppant distribution. This leads to increased propped frac geometry, and ultimately, better conductivity
- Reduced water usage with higher proppant concentrations
- Increased screen out recovery means fewer coiled tubing interventions
- Flowback enhancement increases regain permeability

Untreated Sand

MVP-treated sand
